PROFILE SUMMARY

Certified Software Packaging Administrator and System Administrator with 6 years of experience managing Windows/Linux environments and leading enterprise-level vulnerability management programs. Experienced in using Tenable Nessus to identify, assess, and prioritize security vulnerabilities across servers, workstations, and cloud platforms. Proficient in patch deployment, Active Directory, and Group Policy management. Adept at coordinating with IT operations to implement timely remediations and support incident response teams with technical root cause analysis. Passionate about maintaining secure, compliant, and high availability systems.

SKILLS

- SCCM, Intune
- CAD, Solidworks and CATIA
- Tenable Nessus / Tenable.io
- ITIL Management
- VMWare Virtualisation
- Application deployment
- PowerShell and Bash scripting
- Stakeholder communication
- Vulnerability Management
- **Operating Systems:** Windows Server, Linux
- **Protocols:** SSL/TLS, SSH
- Enterprise Resource Planning Systems

EXPERIENCE:

Software Packaging Administrator, Public Transport Authority (Contract), June 2024- Dec 2025

Software Packaging & Deployment:

Created and maintained MSI, MST, and IntuneWin packages for enterprise applications using tools like AdminStudio, Advanced Installer, and PowerShell.

Packaged and deployed software via SCCM/MECM, Intune, or other deployment tools, ensuring silent, reliable installations.

Developed and maintained application packaging standards for consistency across Windows 10/11 desktop environments.

Troubleshoot complex software package deployment failures, ensuring 99%+ first-time success rate across the user base.

SOE Image Management:

Managed and updated SOE (Standard Operating Environment) images using Microsoft Deployment Toolkit (MDT) and Windows ADK.

Integrated security patches, drivers, and updates into SOE builds, reducing the time to deploy fully updated systems by 30%.

Collaborated with security and compliance teams to ensure SOE configurations aligned with organizational policies.

Automation & Scripting

Automated packaging and deployment workflows using PowerShell, improving delivery time and reducing manual errors. For example, I automated software updates, onboarding flows, and compliance reporting. This reduced manual effort and improved consistency across deployments and migrations. Designed scripts to validate application compatibility and readiness before deployment. Implemented version control and documentation for all software packaging scripts and processes.

Configuration Management & Documentation

Detail oriented records of application packages, versions, installation procedures, rollback steps, and change logs. Performed regular audits of deployed applications to ensure compliance with licensing and configuration standards. Created knowledge base articles and SOPs for packaging procedures and troubleshooting.

Support & Collaboration

Provided Tier 3 support for complex software deployment issues and collaborated and communicated with help desk and desktop support teams. Worked with vendors and software developers to package custom applications and resolve compatibility issues. Participated in project planning meetings to assess and express packaging requirements and deployment time lines.

Virtual Machine Administration

Created, cloned, and deployed virtual machines and templates in VMware vSphere to support testing, development, and production environments. Managed VM snapshots, backups, and restores to ensure data integrity and business continuity. Configured VMware tools, VM hardware, and resource allocation for optimal performance.

Security Specialist:

Conducted regular vulnerability assessments by using Nessus, identifying and prioritizing critical security risks across a multi-platform environment. Scan systems, servers, and networks for vulnerabilities like: Unpatched software, Misconfigurations, Weak or default passwords, and outdated protocols

Vulnerability Management & Threat Detection

Conducted regular vulnerability scans across Information Technology and OT networks using tools like Nessus, Qualys, and Rapid7, identifying misconfigurations, outdated firmware, and zero-day vulnerabilities. Analyzed scan results, categorized findings using the Common Vulnerability Scoring System (CVSS), and prioritized remediation based on risk impact to critical infrastructure. Detected and remediated a critical Apache Log4j vulnerability in an OT-controlled SCADA system within 48 hours of its global disclosure, preventing potential system exploitation.

Vulnerability Assessment and Remediation Planning

Evaluated the impact of vulnerabilities using CVSS and other NIST/NVD standards and provided remediation strategies tailored for segmented OT, Networking and IT environments. Coordinated with cross-functional teams (network, application, and operations) to ensure timely patching and configuration updates without disrupting operations.

Led a vulnerability remediation project that reduced critical/high vulnerabilities by 70% over three months across 120+ networked OT devices.

System Performance & Service Management

Monitored and maintained security system performance, ensuring it met Service Level Agreements (SLAs) through real-time dashboards. Developed and documented SOP's for routine system health checks and incident escalation processes. Research, recommend, and implement technologies that improve efficiency, security, and user experience. Built an automated alerting system using the ELK Stack to detect abnormal traffic patterns in OT PLC devices, decreasing MTTR (mean time to resolve) by 35%.

Airlock Digital Control

Operated and monitored airlock systems to maintain contamination control and compliance with ISO standards. Performed routine checks, preventive maintenance, and troubleshooting of airlock doors, sensors, and control panels. Maintained accurate logs, reports, and documentation for audits and regulatory compliance. Trained staff on proper airlock usage, safety protocols, and standard operating procedures (SOPs).

Collaboration with Security Stakeholders

Detected vulnerabilities in outdated firmware of industrial controllers. Coordinated with OT engineers, safety officers, and vendor support to develop a safe patching plan during a scheduled maintenance window.

Provided documentation on risks, compensating controls, and rollback strategies. Outcome: Successful patching of 40+ vulnerable OT endpoints without downtime.

ITIL Process Management:

Implementation and coordination of Change Management processes to ensure efficient deployment of changes with minimal disruption.

Managing Change Advisory Board (CAB) meetings, reviewing change requests, and ensuring all changes are properly assessed, authorized, and documented.

System Administrator (Nestle Project), HCL Technologies, April 2018-January 2023 Noida, India

Infrastructure Management:

Managed the setup, configuration, and ongoing maintenance of essential IT infrastructure, including servers and workstations, to ensure smooth operations and peak performance. Oversaw the installation and management of antivirus software across the organization's entire network. I have experience using ERP systems in a commercial, accrual-based environment. I assist users with system access, navigation, and basic troubleshooting. I perform data entry and validation to ensure accuracy. I support finance and operations teams by resolving ERP-related queries. Complex issues are escalated to senior support or vendors as needed.

Automated Patching & Security compliance:

I implemented automated patching and scripting to improve security compliance and reduce manual effort across server environments. I supported Active Directory by managing user accounts, group memberships, and access permissions in line with organisational policies. I assisted with server monitoring, troubleshooting, and incident resolution to maintain system availability. I supported virtualised environments and routine system maintenance activities. I documented changes and followed ITIL and security best practices to ensure operational reliability.

Monitor Deployment Progress:

During application deployment, monitor the progress closely using Microsoft monitoring tools. If a failure occurs, System Centre configuration manager will typically log the error and halt the deployment at the point of failure. Windows Autopilot for pre-provisioned deployment, Co-management, conditional access, and MAC for IOS and Android devices.

Incident Response and Problem Resolution:

Led incident response efforts, conducting root cause analysis and implementing corrective actions to prevent the recurrence of issues, fostering a culture of continuous improvement and operational excellence. Provided training and support to end-users, ensuring a smooth transition and adoption of new systems.

Documentation and Compliance:

Maintained comprehensive documentation of system configurations, procedures, and troubleshooting steps. Compliance with SCCM, SSRS and Update Compliance in Azure. facilitating knowledge transfer and strategic solutions with regulatory requirements and industry best practices. Monitored system performance, troubleshoot issues, and recommended corrective actions to minimize downtime and improve user satisfaction.

Reporting: Utilized SQL queries to generate reports for client health, operating system deployments, software update status, and hardware inventory.

EDUCATION AND TRAINING

Master of Science

Master of Engineering (M.E.) in Mechanical Design and Manufacturing, JNTU University, Hyderabad, India

Bachelor of Science

B.E. in Mechanical Engineering, JNTU University, Hyderabad, India

High School Diploma

State Board of Technical Education And Training, India
